

Cyber Security

PORTFOLIO

MATT BOUTILIER (W0498901)

FALL 2025

ICOM2702: PPIT II

Overview

CORE FOUNDATIONS

- Ethics
- Accountability
- Reliability

COLLABORATION

Communication and teamwork under pressure

LIFELONG LEARNING

A commitment to continuous growth

TECHNICAL EXPERTISE

- Device Management
- Threat Detection
- Vulnerability Mitigation

The background features a light blue gradient with several 3D-rendered spheres and organic, cloud-like shapes in shades of blue and purple. These elements are scattered across the frame, with a larger cluster on the left and smaller ones on the right and bottom.

Core Foundations

ETHICS, ACCOUNTABILITY, &
COLLABORATION

Ethical Conduct

PHIA & PIPEDA Compliance

In past professional roles, I managed confidential user data subject to *PHIA* and *PIPEDA* regulations.

This required strict data residency policies, ensuring sensitive information was not stored or transmitted outside of Canada, safeguarding PII.

Accountability & Collaboration

Accountability

I followed rigorous security and risk management procedures for screening all third-party vendors to ensure data integrity.

This maintained compliance with all data handling policies, resulting in zero breaches during my tenure.

Collaboration & Communication

I drive success through structured collaboration, strategically distributing tasks to match individual strengths, and have experience organizing large virtual and in-person meetings, as well as a wealth of knowledge around employee training.

Reliability & Lifelong Learning

PROVEN RELIABILITY

I have a track record of reliability, from delivering high-stakes academic projects on time to successfully managing sensitive data with zero incidents in a professional setting.

COMMITMENT TO GROWTH

I am independently developing a Bash script as an all-in-one network tool. It currently detects port changes, with future plans for ping, traceroute, and nslookup features.

The background features a light blue gradient with several abstract, 3D-rendered shapes. On the left side, there are large, overlapping blobs in shades of blue and purple. Scattered across the right side are several smaller, solid blue spheres of varying sizes. The overall aesthetic is clean and modern.

Technical Skills

COURSEWORK SHOWCASE

Device Management

Intune MDM Report

This project analyzed Microsoft Intune as a comprehensive Mobile Device Management (MDM) solution.

- Recommended specific policies for BYOD scenarios (e.g., app-level PINs, no clipboard sharing) to secure company data.
- Proposed using Apple Configurator to streamline the integration and management of Apple devices.

Threat Detection

Network Security Script (Bash)

I developed a custom Bash script to perform active network monitoring and threat detection.

The script monitors a defined IP address for any changes to open ports at a user-set interval. This provides an early warning for unauthorized services or potential intrusions on a network.

Vulnerability Management

Nessus Vulnerability Report

I planned and executed an uncredentialed and a credentialed vulnerability scan using Nessus to assess a target system's security posture and analyzed the output to prioritize flaws based on severity.

This project demonstrates end-to-end vulnerability management, and data-backed mitigation recommendations.

Conclusion

PROFESSIONAL FOUNDATIONS

My experience proves a strong foundation in ethical conduct, accountability, and collaborative problem-solving, essential for any high-trust environment.

PROVEN TECHNICAL KNOWLEDGE

I possess hands-on, practical skills in key cybersecurity domains: device management, active threat detection, and end-to-end vulnerability management.
